

Today Science Club are going to be.....

Looking at TECHNOLOGY!

Technology began with people making simple tools – see axeheads!

Then went on to the invention of the wheel!

We will now be looking at technology that were around when your parents were young:

Tick the boxes to say which technology is around **now**, tick when there were around when your **mum and dad** were children and tick which were around when your **grandparents** were children.

	Now	M&D were children (20yrs ago)	Grandparents were children (30-50yrs ago)
Flying cars			
Computers			
Xbox/playstation			
TV			
Mobile phone			
SATNAV			

Many of you have a **printer** at home or have used one at school. These print in **2D** (two dimensions) so they are **flat**. Today we have a printer that prints **3D** (three dimensions) which gives **solid shapes**.

Note to parents: 3D printers have a plan and then use custard powder-type mixture and liquid plastic to make 3D shapes. They even sent one to the International Space Station to make spares!
